*This publication can be really worth a go through, and superior to other. It is amongst the most amazing publication we have go through. You wont feel monotony at anytime of your own time (that's what catalogues are for about when you request me).*

LAP Lambert Academic Publishing Dez 2012, 2012. Taschenbuch. Condition: Neu. Neuware - Dielectrophoresis (DEP) is manifested as liquid actuation on the top of dielectric-coated electrodes under AC voltage; upon voltage removal the liquid flow breaks into uniform droplets by capillary instability. In this book, Dr. Kai-Liang Wang and Prof. Thomas Jones study the DEP mechanism, and correlate and distinguish DEP and electrowetting. Both mechanisms have great potentials for lab-on-a-chip applications; however, integration of fluidic handling with miniaturized analytical or diagnostic modules imposes challenge on control mechanism. The objective of the authors is to implement timing-based and optical-sensing based dynamic control schemes on DEP devices, and to demonstrate advanced control strategies for high-speed liquid actuation and precision drop dispensing. This book provides an introduction to liquid electromechanics, and a protocol for microfluidic device fabrication and material selection. It also gives a reference for optical detection prototyping, and envisions a simple but practical path for developing novel microfluidic systems. It will be highly useful to graduate students, engineers and scientists in academia and in industry. 200 pp. Englisch.
