

## Factory and Industrial Management Volume 61, no. 5

By John Robertson Dunlap

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 112 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 edition. Excerpt: . . . we are beginning to have scientific determination of depreciation charges; a machine hour distribution of maintenance, rent, light, heat, etc. ; a critical examination of power generation and use, with the introduction of control instruments in the boiler room and at the switchboard. Let the examination extend to the transportation function. Transportation, from a cost accounting point of view, has been regarded as an auxiliary to the stock room, or a part of maintenance expense, to be split up among the various manufacturing departments on the basis of labor hours, or production count, or some such scheme of overhead distribution. It is seldom segregated by itself. There are excellent reasons why such a distribution is a convenient and desirable method of handling it from the point of view of total factory cost, but the result has been effectually to disguise the growing importance of...
